

Regression Discontinuity Estimates for the Effect of Exceeding BAC Thresholds on Predetermined Characteristics

Characteristics	Male	White	Age	Accident
DUI	0.029	0.004	-0.001	-0.008
std.error	0.002	0.002	0	0.002
Mean (at 0.079)	0.801	0.864	33.62	0.099
Controls	No	No	No	No
Observations	973	973	973	973

*Note:*

This table contains regression discontinuity based estimates of the effect of having BAC above the legal thresholds on predetermined characteristics. Panel A focuses on the estimated effect of BAC above the DUI threshold. The regression has a bandwidth of 0.05 and uses a rectangular kernel for weighting. Based on data from the 1999–2007 Washington State Impaired Driver Program.
